

## UI/UX Design for Web Applications for Enterprise Business Operations.

**Client:** The client is an entrepreneur having an enterprise running with various teams in the USA.

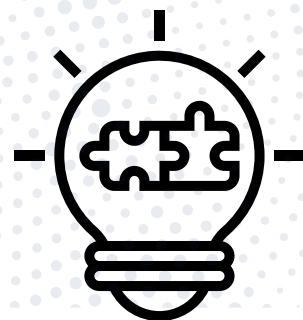

### Business Challenge:

Since the client is a growing entrepreneur, they wanted to have a web application to track working time and business operations including reports, teams, clients, projects handling in different domains, and more requirements. Also, their foremost requirement was to have hassle-free operations with essential functions and intuitive UI/UX design.

### Solution Delivered:

After a complete analysis of the client's requirements, we helped them move the project with our experts for developing web applications with UI/UX designs. We took a complete study and understood their business processes, demanding needs to be fulfilled. CG-VAK helped them develop a web application to track business operations, project handling, teams, and time for productivity with seamless workflow, smooth interface, and hassle-free actions in the app. We are happy to achieve the client's needs in a short period.

## Business Benefits:

With the newly developed application with UI/UX design, the client was super happy, and they were able to achieve such as:

-  Easy management
-  Easy Retrieving of assigned tasks and project analytics
-  Seamless business operations
-  Hassle-free workflow
-  Visual designs lively projected for every requirement and analytics
-  Project support with Timer and tags
-  Tracking for management of projects
-  Easy navigation with new UI interface and designs

## Technologies Used:

Bootstrap

Figma
