

Accelerating process speed for Decision Making with SAP BODS and products

Client: The client is a reputed professional consulting with advisory on risk management, legal, tax, and financial services.

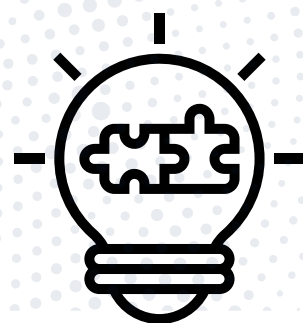

Business Challenge:

Since the client is a worldwide audit and consulting company, they have enormous databases distributed across various departments and units in different locations. In such a way, their process was manual, and reporting was difficult based on the request raised. On daily basis, the complete business process takes up to 20 hours which is hectic for employees to meet their customer's needs.

Solution Delivered:

With deep expertise and knowledge in SAP products, we implemented 4TB of Data warehouse with SAP HANA for their financial System databases. We helped combine the data from the centralized data warehouse by building an API for external. Also, for data integration with existing BI, data profiling, and processing, from the data warehouse system, we used SAP BODS from source to target. Other technologies such as SAP HANA, CRM and SAP DQ are used for the entire business process to make it easier. Thus, it helped our clients get work done fast and deliver high-quality reporting.

Business Benefits:

With the new system implemented with new technologies, the client was able to achieve:

- High storage for storing databases.
- Simplified accessibility to retrieve data on daily basis.
- Accessible from multiple enterprises.
- Data Quality Management.
- Geocoding validations using SAP DQM Transforms
- SAP DQ embeds data quality functionality into SAP applications.
- Hassle-free workflow.
- High-speed business operations.
- Easy management of reporting.
- Decreased manual work time.
- Faster decision-making for businesses.
- Easy deployment.
- Reduced Data management and maintenance.
- Accessible to the secured environment.

Technologies Used:
