

Ecommerce website development with AWS platform

Client: The client is a reputed and leading food processing and trading company in the USA.

Business Challenge:

Our client needed an ecommerce website for branding purposes and to showcase the products they are selling. The ecommerce store should have the requirements such as:

- ▲ Way to have the best customer experience
- ▲ Cloud hosting with large storage capacity
- ▲ Ecommerce store website with secured payment gateway
- ▲ Seamless performance 24*7
- ▲ Manage orders, accounting, inventory, and shipping on a single Application
- ▲ And more...

Solution Delivered:

With well-experienced teams, we thoroughly analyzed their complete business requirements with a roadmap and suggested creating a web app that works irrespective of devices and platforms. With the in-depth knowledge in ecommerce store development, we helped create a store with the requirements that the client kept and with the assurance of disaster recovery and data redundancy. Moving into the cloud journey, Our AWS experts helped to host with Amazon Web Services. This helped the website in one package.

Business Benefits:

With our online education & assessment system web application, they were able to achieve:

-  Ecommerce website with high page load time.
-  High-Speed score and responsiveness.
-  Great storage capacity.
-  Highly secured payment gateway.
-  Seamless customer experience.
