

## Migration using NoSQL in Financial services

**Client:** The client is a reputed financial business firm located in the USA.

### Business Challenge:

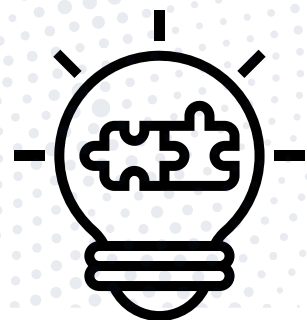

Our client has an existing marking system with more challenges and troubles as they have the system with legacy technology. The client's requirements are:

- ▲ The app should be User friendly
- ▲ Easy retrieving of data
- ▲ Should have increased speed without delay
- ▲ Easy Auditable
- ▲ And more...

### Solution Delivered:

With well-experienced teams, we thoroughly analyzed their business requirements and suggested employing NoSQL solutions for the marking system. Utilizing NoSQL provides more data storage with high speed in performance. Additionally, we helped them make facilities in approving loans for clients online thus, it made their customers get loans and transactions easily staying at the same place.

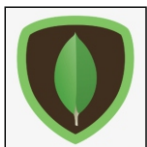

## Business Benefits:

The new marking system/application made our client happy, satisfied and was able to achieve:

-  High-speed with flawless performance
  -  High storage capacity
  -  Scalability
  -  Easy auditable
  -  Easy loan application
  -  Easy document submission
  -  User friendly
  -  Trouble-free data retrieving
  -  Easy inspection of data
  -  High security
  -  Facility to migrate to latest technologies in future
  -  Fraud detection
  -  Recognition of malicious behavior
  -  Flexibility and high efficiency
- And More...

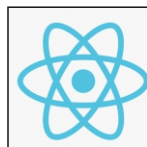

## Technologies Used:

Mongodb

Node Js

React js
