

React Native mobile app for food order & restaurant booking system

Client: The client has a business firm aiming to target local restaurants with a mobile application in the USA.

Business Challenge:

Our client wanted a user-friendly mobile application with a seamless experience in taking food orders and restaurant booking. Local restaurants have difficulty in taking orders and bringing customers to their place. Using the mobile application, the client has to get in sync with local restaurants with a flawless experience in managing orders and booking restaurants.

Solution Delivered:

After a complete analysis of the business challenges and the requirements, we came up with developing a mobile application for food order and booking system. With our mobile application, the client can easily manage all the data of restaurants, connect and track all the activities.

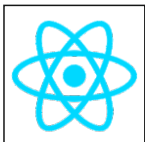

Business Benefits:

With our food order & restaurant booking application, the client was able to manage their business with the large number of local restaurants and other benefits we achieved what the client asked for:

-  Mobile application with scalability
-  Rapid response and tracking
-  Seamless and hassle-free application experience
-  Easy deployment in both android and iOS
-  Food order tracking and management
-  Data transparency with restaurant
-  Enabled Location service
-  Offers and discounts for food which you like to dine
-  User friendly at both the end
-  Data security within the restaurant and end-user
-  Secured digital payment gateway.
-  Third-Party support

Technologies Used:

React Native

NodeJS with Sequelize.js

PostgreSQL
